

TINTING SURFACER 8-149

The De Beer Tinting Surfacers 8-149 with its numerous uses has the potential to be a very useful tool in the refinish industry.

8-149 can be mixed and sprayed in two ways,

1. As a Wet on wet type of sealer tinted to your choice of colour, or even tinted with clear to make a very effective transparent sealer.
2. As a sandable surfacer tinted to a colour of your choice.

The big advantages here are that tinted you can achieve less topcoat application regardless of whether they are poor hiding topcoats or not. Mixed with clear, as a sealer, the advantages are, a more stable substrate concerning old touch up's etc. while still remaining transparent. 8-149 is also very effective at making those unfortunate stone chips a little less obvious to the eye due to the primer being very close in colour to the top coat.

Colours can be made up either to a formula from the ICRIS formula retrieval system, or to suit, as an eye match of your choice.

All in all the DeBeer 8-149 Tinting Surfacers has the ability to increase production and therefore offer improved profits in your Refinish shop. Available from your local De Beer distributor in 1 or 3 litre packaging. A simple and yet very effective tool that can make our job's as applicators that little bit easier.

The De Beer 1-165 Spot repair aerosol was introduced after tremendous feedback from end users in the refinish industry. With its ability to be sprayed over wet on wet or dried and sanded it has become a very successful part of the De Beer range of products.

One of the 1-165 strengths is its ability to be used as a direct to metal rub through primer on small areas, instead of making up extra primer once you are ready to go just give the aerosol a good shake and apply and apply directly to your cleaned substrate.

1-165 applies very evenly due to its fine nozzle set up allowing for effective wet on wet applications

Sanding is also very easy after approximately 5 minutes. Available from your local De Beer distributors in a 400 ml pack.

A simple and yet very effective tool that can make our jobs's as applicators that little bit easier.

A woman is brought to court after stealing from a supermarket. "Mrs Cousins," says the judge, "what did you take?" "Just a small can of peaches in the can." "Six peaches....hmm...I sentence you to six nights in jail, a night for each peach." "The woman is about to collapse to the floor when her husband leaps to his feet. "Your honour," he shouts, she also stole a can of peas.
